# Implementation of Provision to Upload Multiple Excel Sheets for Bulk Aadhaar Seeding

# Bulk

# Aadhaar

# Seeding

ESIC is a social security organization under Ministry of Labour and Employment which provides medical and cash benefits in the exigencies of sickness, maternity, disablement, death, employment injury and unemployment to the workers in the lower wage bracket and their family members. Designed for those in the lower wage category, the ESI Scheme operates on contributions from both employers and employees at predetermined rates.

In this version we are introducing Implementation of Provision to Upload Multiple Excel Sheets for Bulk Aadhaar Seeding in a single day.

# Bulk

## Aadhaar

# Seeding

However, lack of identification and authentication data poses operational challenges. To address this issue, Aadhaar Seeding initiative was introduced to streamline the process of linking Aadhaar numbers with ESIC for seamless authentication and verification. Currently, ESIC employs eKYC authentication facility utilizing various modes such as OTP, Biometric, and Face Authentication to seed Aadhaar and validate demographic details against the Aadhaar Database.

In this proposal, it was suggested to implementing a system for bulk Aadhaar seeding for employers, enabling them to upload a file containing employee demographic details and Aadhaar numbers. The system will utilize the Yes/No authentication facility of UIDAI for verification and establish consent via SMS post-transaction with an opt-out option.

In this version we are introducing Implementation of Provision to Upload Multiple Excel Sheets for Bulk Aadhaar Seeding in a single day.

Users can download and upload 4 files in a day.

Each File must contain 250 records.

File processing must work as explained in the illustration below.

### Illustration:

Day 1: Say when user download 1st file on day 1 then records with name N1, N2, N3 and N4 must be downloaded.

If user downloads 2nd file, Records with name N5, N6, N7 and N8 until user has not.

If user downloads 3rd file, Records with name N9, N10, N11 and N12 until user has not.

Day 2: Say when user download 1st file on day 2 then records with name N17, N18, N19 and N20 must be downloaded.

If user downloads 2nd file, Records with name N21, N22, N23 and N24 until user has not. If user downloads 3rd file, Records with name N25, N26, N27 and N28 until user has not. If user downloads 4th file, Records with name N29, N30, N31 and N32 until user has not

Now from Records processed on 1st day Aadhaar seeding Failed on Day 2 due to applied logics: N2, N6, N10, N13, N16

Due to 24 hours condition on Day 3 failed records will be included by (System will include failed records again in upcoming file after completion of file processing cycle) system in Sheets of Day 3 as:

1st File must include N2, N6, N10, N13.

2nd File must include N15, N33, N34, N34

And so on.

System will allow user to upload 2nd file once 1st file is uploaded

on 2nd day system will allow to download 5th file only if 4 previous file processed successfully.
